Relevant Experience

Senior Software Engineer @ Mercado Libre

Ago 2022 — Present // Bogotá, CO

- Led high-impact technical initiatives across seller experience and reputation systems.
- Designed and implemented frontend and full-stack solutions focused on scalability and maintainability.
- Served as a technical reference for the team, supporting architectural decisions and engineering standards.
- Collaborated with Product, UX, and Backend teams to align technical solutions with business objectives.
- Conducted code reviews and mentored engineers, improving code quality and decision-making processes.
- Participated in the design of high-traffic systems with a strong focus on performance and reliability.
- Contributed to the continuous improvement of development processes and engineering best practices.
- Took ownership of critical features from discovery through production deployment.

Senior Full Stack Developer @ Newton Vision Corp

Nov 2020 — Ago 2022 // Bogotá, CO

- Promoted after strong performance as Quality Analyst.
- Led a full-stack project using React, React Native, Node.js, and AWS.
- Designed and implemented integrations with QuickBooks to support legacy systems.
- Delivered a scalable accounting platform while ensuring backward compatibility.
- Built and maintained complex user interfaces using Angular.
- Designed and implemented efficient .NET backend services.
- Worked across frontend and backend to deliver cohesive, production-ready features.
- Emphasized clean architecture, performance, and maintainability.

Software Quality Analyst @ Newton Vision Corp

May 2020 — Nov 2020 // Bogotá, CO

- Reviewed code quality and ensured adherence to best practices.
- Designed and implemented automated test suites using Cypress.
- Provided detailed, actionable feedback to developers.
- Improved overall product stability and development standards.

Software Developer @ On Watch Us

Feb 2017 — May 2020 // Texas, US

- Led the development of a cross-platform application using Flutter.
- Worked directly with stakeholders to define requirements and prioritize deliverables.
- Participated in project planning, estimation, and technical execution.

Skills

Programming Languages

JavaScript, TypeScript, Node.js, Java, C#, Go

AI / Data

- LLM Integration (OpenAI APIs)
- RAG Architectures (conceptual + applied)
- Embeddings & Semantic Search
- Prompt Engineering
- Data Processing Pipelines

Libraries & Frameworks

React, Next.js, Node.js, Angular, Redux, Recoil.js, Flutter, .NET, Spring Boot, Material UI, Storybook, Styled Components, Vite, Prisma, Jest, Unit Testing, Cypress, Playwright.

Tools & Platform

Git, Gulp, Webpack, Contentful, Docker, Firebase, Vercel, Jira.

Design

Figma, Sketch, Accessibility, Atomic Design.

Architecture

Microservices, Distributed Systems, RESTful/gRPC/GraphQL APIs, Cloud-native design

Projects (Personal Exploration)

AI-Enhanced Applications

Developed prototypes integrating Large Language Models (LLMs) to power conversational interfaces and workflow automation. Experimented with Retrieval-Augmented Generation (RAG) pipelines using embeddings and document retrieval techniques.

Crypto June

Mobile application built with React Native for real-time cryptocurrency tracking. Integrated with the CoinGecko API and implemented state management solutions for dynamic data visualization.

PonsdHive

Platform developed with Next.js and Prisma for port operations management. Designed with scalability, extensibility, and modular architecture as core principles.
